Two flat surfaces are exposed to a uniform, horizontal magnetic field of magnitude 0.51 T. When viewed edge-on, the first surface is tilted at an angle of 11 degrees from the horizontal, and a net magnetic flux of 0.0093 Wb passes through it. The students often think of physics as a collection of equations that can be used to systematically solve problems without much thought. However, a solid problem-solving technique starts with a firm grasp of physics concepts and how they fit together to provide a coherent description of natural phenomena.
